Mini Project 3: NLP and NLU

Objective

Analysis of non-structured data and integrating it with structured data in a context.

Tasks

Extending the research and MP2 with natural language documents processing and understanding.

1. Search Internet for text documents related to some of the targeted companies, such as
    a. web page
    b. media article
    c. other related documents
2. Load the content in a text processing program and preprocess it applying the methods and tools regarded in class.
3. Select one or more typical NLP implementations and create a prototype of an application testing it on your processed document collection.
4. Provide a brief discussion on the possible advantages of NLP implementation, as well as on the difficulties you have experienced developing it.

This is a 'study points' assignment, which brings 10 credits, where 3 are for peer-grading.
